

Take a look at what producers are saying about MasterWean!

- **“Our pigs are coming out of the nursery 5 lbs heavier!”**
-Oxford County Producer, 4 week weaning, 8 weeks in the nursery, using White B and Blue C
- **“We are impressed with how quickly the piglets start on Red A and B. The high digestibility has reduced scours (K88) in our barn.”**
-Middlesex County Producer
- **“We wean at 14 to 15 days and feed MasterWean Red A mixed with warm water as a gruel for the first 2 days. We feed it dry for the balance of the week or until they move to nursery. We tried 3 other different companies products. The MasterWean Red A is by far the best. The pigs like it.”**
-Lambton County Producer
- **“We had early-weans come off the truck, go into the pen, then go right to the feeder and start eating Red B. We have never seen this before.”**
-Kent County Producer, the piglets were fed Red A as creep feed at the sow herd.
- **“We’ve seen the difference in the take off and they don’t slow down.”**
-Lambton County Producer
