

Take a look at what producers are saying about MasterWean in Western Canada!

“I’ve found since using MasterWean Red A as our creep feed, weaning stress is minimal. The pigs never lose their bloom...it’s like they never been taken off the sow. I follow the Red A product with MasterWean Red B. We’ve tried quite a few starter combinations over the years, but nothing rivals the MasterWean program we are on today.”

-Mike Hofer, Spring Ridge Colony, Wainwright, Alberta, June 12, 2005

“We’ve been using MasterWean Red A, B, & C feeds since they were first manufactured in January 2005. We were looking for a creep/starter program that would reduce our mortality and our days to market. It has outperformed anything we have tried in the past. Liveability, feed conversion, daily gain...it’s the best!”

-Eli Hofer, Scotford Colony, Fort Saskatchewan, Alberta, August 1, 2005

“I’m presently buying MasterWean Red A followed by MasterWean Red C. The rice pellet and the palatability of this program allow me to get feed into my pigs at a much younger age than any other product I’ve used. We’re seeing some awfully large litters lately and these products have minimized the problems associated with this. The products just do an excellent job, both in the crate and on the decks.”

-Dave Tschetter, Holt Colony, Irma, Alberta, August 12, 2005
