

Who Uses: PERFORMA™ EXTRUDED 14% RACE HORSE RATION (600666)

Trainers of performance horses requiring a high fat, low carbohydrate diet. Horse owners wishing to vary the texture of their horses' diet, mix performance with other feed forms.

Description

An extruded feed, intended for performance horses, providing more digestible energy and with less risk of digestive upset.

Features

- Available in extruded form only.
- Contains 6% fat.
- Contains 14% crude protein.
- Contains added levels of minerals and vitamins.
- Oil/molasses coating

Benefits

- Increases the nutrient availability and provides a readily available source of energy.
Slows down the eating process reducing the risk of over consumption.
Reduces feed waste and extends shelf life of feed.
Decreases incidence of feed allergy.
- Concentrated form of energy which complements the starch of grains to provide readily available energy. Added fat enhances haircoat lustre.
- Provides essential amino acids for the "performance" horse.
- To provide the needed nutrients for performance and recovery.
- Increases palatability.

Directions For Use:

Feed ½ to 1 ½ kg of Performa™ per 100 kg body weight per day, with good quality dust-free hay. The actual amount fed will depend on condition, level of activity or work performed, and the quality of hay or grass.
