

Who Uses: Frisky Foal Pellets (600683)

This foal ration is suitable for all types of horses up to 12 months of age used to reduce weaning stress and promote steady growth.

Description

A pelleted feed intended for nursing foals to weaning and up to one year of age to encourage growth, development and to wean the foal away from milk.

Features	Benefits
•Available in pellet form.	Foals cannot separate the ingredients so nutrition is consistent in each mouthful.
•Contains dehydrated alfalfa and molasses.	To assure a palatable ration for total consumption.
•Low carbohydrate, low glycemic.	Helps in the reduction of developmental orthopaedic problems.
•High level of trace minerals from organic sources.	More bio-available resulting in higher uptake of trace elements which are essential for the development of strong healthy joints.
•High level of protein and lysine.	Improved growth.
•Added yeast.	Improved digestion and increased availability.
•High level of vitamin E and chelated trace minerals.	Improved immunity.
•Highly fortified formulation.	Allows flexibility of feeding rates including a lower feeding rate for “easy keepers”.
•Contains added B-vitamins.	Required by the young foal for growth and health as B-vitamins are not stored in the body.

Directions for Use:

FOALS: Feed $\frac{3}{4}$ to 1 kg of 17% Frisky Foal per 100 kg body weight.

WEANLINGS: Feed 1 to 1 $\frac{1}{2}$ kg of 17% Frisky Foal per 100 kg of body weight. This feed should be fed when foals are still on their dams and up to one year of age.

With poor quality hay and grass, feeding a higher amount of 17% Frisky Foal will provide good development.
